No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1982 articles are the same as those shown for current articles.

Papers to Appear in Forthcoming Issues 363
Author Index for Volume 17 366

Information for Contributors

Brain and Language publishes original research articles, case histories, critical reviews, and scholarly notes; each contribution will be concerned with human language or communication (speech, hearing, reading, writing, or non-verbal modalities) related to any aspect of the brain or brain function. Each will have theoretical import, either formulating new hypotheses, or supporting or refuting new or previously established ones. The interdisciplinary focus includes the fields of neurology, linguistics, neurophysiology, psychology, neuroanatomy, psychiatry, neurosurgery, and speech pathology. Manuscripts of several different types are solicited: regular articles, single or multiple case history studies, critical reviews of books of interest to the journal's readership, and short (limited to under 10 pages typed) scholarly notes and comments discussing issues of topical interest.

Manuscripts should be submitted to either:

Editor: Harry A. Whitaker, Ph.D.
Department of Hearing
and Speech Sciences
University of Maryland
College Park, Maryland 20742

Associate Editor: George Ojemann, M.D.
Department of Neurological Surgery, RI–20
University of Washington
Seattle, Washington 98195

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Brain and Language* represent the opinions of the author(s) and should not be construed to reflect opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Authors should submit manuscripts in *quadruplicate* (one original and three copies), typewritten, double-spaced on one side of 8½ × 11 in. white paper. The original and two copies of all artwork, tabular material, photographs, etc., must also be included. All pages should be numbered consecutively.

Page 1 should contain the article title, author(s) name(s) and affiliation(s), abbreviated form of the title for the running page heading (not to exceed 35 characters including letters and spaces), and the complete mailing address of the author to whom all correspondence should be sent. *Page 2* should contain a short *abstract* of approximately 100 words.

Papers must be written in English. Language data may be given in English when clearly identifiable, otherwise it should be transcribed into the phonetic alphabet of the International Phonetic Association (IPA).

Figures should be numbered in order of appearance (with Arabic numerals) and should have short descriptive captions (typed double-spaced on a separate page). Line drawings must be originals in black India ink on white paper, on polyester drafting film, or comparable glossy black and white photographs. Lettering should be uniform, professionally done, and large enough to be fully legible after a 50–60% reduction in printing.

Tables should be numbered in order of appearance (with Arabic numerals): they should be typed double-spaced on a separate page. Each table should have a short descriptive title typed (double-spaced) above the table. Footnotes to tables (indicated by superscript lower

case letters,[a,b], etc.) should be typed (double-spaced) at the end of the table. Keep in mind the dimensions of the journal when planning the number of columns in a table.

Footnotes to the text should be kept to a minimum; when necessary, they should be indicated by superscript Arabic numerals,[1,2], etc., cited consecutively throughout the article, starting with the title. They should be typed double-spaced on a separate page.

References should be cited in the text by surname of the author and the publication date in parentheses, e.g., Goldstein (1948) or (Russell and Espir, 1961). If more than one paper was published by the same author in a given year, the correct style is Broca (1861a) or (Broca, 1861b).

References should be listed alphabetically, typed double-spaced at the end of the article. All references cited in the text must be listed at the end of the paper. Journal titles should be written out in full, not abbreviated. Note the following examples.

Allison, R. S. 1962. *The senile brain.* London: Edward Arnold.

Koh, S. D., Vernon, M., & Bailey, W. 1971. Free-recall learning of word lists by prelingual deaf subjects. *Journal of Verbal Learning and Verbal Behavior,* **10,** 542–547.

Luria, A. R., & Tsvetkova, L. S. 1970. The mechanism of "dynamic aphasia." In M. Bierwisch & K. E. Heidolph (Eds.), *Progress in linguistics.* The Hague: Mouton. Pp. 187–197.

(Use underlining for journal and book titles only.)

Proofs. Galley proofs will be sent to the designated author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty (50) reprints without covers will be provided free of charge for articles. Additional reprints may be purchased; an order form will be included with proofs.
